RE: Project No. E336, Facility for Showcase Marble, Inc. Pompano Beach, Florida

Dear Gene:

As per my conversation with Mr. Paul Hunter of Showcase Marble, Inc. changes were made in the location of the Hazardous Material Storage Room and the Mixing Room as follows:

1. The Hazardous Material Storage Room was moved west and is now located directly behind the Mixing Room. The face shell of the block that divides these rooms is required to be removed and filled with concrete to attach the concrete slab to same. All holes in the block shall only penetrate the void portion of the block and shall not involve the removal of any web members or any block and such holes shall not be over 4" wide and not over 5 1/2" above the bottom of the concrete slab (5" minimum). The open cells of all block below the bottom of the poured concrete slab shall be stuffed with paper so that the concrete will not fill all of the voids below the concrete slab. When the concrete is being placed for the slabs it is imperative that a vibrator be utilized so that the concrete will fill the void in its entirety and fully encapsulate that portion of all face shells of the face shall removed. The above is extremely important for the stability of this portion of the north wall.
2. Due to the fact that the Mixing Room was made 14'-0" long in lieu of 12'-0" an additional No. 4 bar must be added between and parallel to

P.O. Drawer 1300
Pompano Beach, FL 33061

RE: Project No. E336, Manufacturing Facility for Showcase Marble, Inc.
Pompano Beach, FL - Permit No. 87-3398

Dear Sir:

On October 24, 1988 I made a visual observation of the Unibilt Enclosed Track Conveyor by the Jervis B. Webb Co. installed at the above Project in lieu of the 1/4 ton hoist runway as called for on the permitted design drawings. The load capacity of two (2) Unibilt hand pushed trolleys connected in tandem with a load bar is 500 pounds. The load capacity of four (4) Unibilt hand pushed trolleys connected in tandem with load bars is 1,000 pounds. The above trolleys together with the track system when designed and installed in strict accordance with the Unibilt Overhead Installation as described in the Jervis B. Webb Co. Design and Installation Manual will provide a lifting capacity of slightly less than 1/4 ton due to deducting the weight of the hoist, chain and etc. At no time shall both trolleys impose any load on the same tension support rod.

Respectfully,

[Signature]
Allan A. Kozich, P.E.
