RE: Arborist Report, 1401 Southwest 26th Avenue, Pompano Beach, FL

Dear Scott Griggs,

As discussed, our arborist team inspected the trees at the 1401 Southwest 26th Avenue, Pompano Beach, FL site on July 21st, 2025.

Attached are our findings.

If you have any questions, I can be reached directly on my cell phone at 843.540.4471 or via email at JohnSnow@treecheckup.com.

Best regards,

John W. Snow

CONSULTING ARBORISTS

1401 Southwest 26th Avenue, Pompano Beach, FL.

Tree Inventory and Assessment Summary

On July 21, 2025, our team conducted a comprehensive tree inventory and assessment at 1401 Southwest 26th Avenue, Pompano Beach, Florida.

All trees on the property were identified, measured, and assessed according to industry standards, including:

- **Species identification** by both **common and botanical name**;
- **Diameter** measured at **DBH (Diameter at Breast Height, 4.5 feet above grade)**;
- **Canopy spread, overall height**, and for palms, **clear trunk height**;
- **Condition rating**, following the **10th Edition of the Guide for Plant Appraisal**, expressed as a percentage (0–100%).

Each tree was tagged onsite using anodized aluminum tags, and the assigned Tree ID numbers correspond directly with the entries in the tree table. High-resolution, georeferenced photographs of each tree are included as hyperlinks in the table.

All fieldwork was performed under the supervision of an ISA Board Certified Master Arborist using sub-meter GNSS equipment referenced to the Florida CORS network.

Mitigation and Specimen Tree Evaluation

Tree mitigation values were calculated using the methodology defined in **Rule 14-10.057 of the Florida Administrative Code**, effective October 2020.

No specimen trees were present on-site. As defined by local ordinance, specimen trees are hardwoods with a **DBH of 18 inches or greater** and a **condition rating of 60% or higher**.

Assessment Notes

The condition rating for each tree reflects its overall health, structure, and longevity potential.
