**Re: Arboricultural Consulting Services for The Oaks at Palm Aire, Pompano Beach, FL – Relocation Suitability**

To Whom It May Concern,

We visited the above-mentioned property on Thursday, February 27, 2025, and Friday, February 28, 2025, to inspect the existing trees and palms on the property and to determine their suitability for a relocation effort.

We have provided our findings within the attached Excel spreadsheet that has the health condition table based on the Council of Tree and Landscape Appraisers 10<sup>th</sup> Edition (CTLA). The table includes the species, both common name and botanical name, measurements, current health condition rating, observations and disposition column.

We reviewed a total of 293 trees and palms. Eight of these trees we deemed candidates for relocation, and we have provided recommendations for each of those trees, see attached. In addition, we identified 84 Cabbage palms, *Sabal palmetto* that are suitable for relocation. There are 32 trees and palms listed for preservation in place. We were not assigned to provide a tree preservation plan at this time.

Sincerely yours,

A handwritten signature in blue ink, appearing to read 'J. Chancey'.
