

Principle #1 Surveillance: Natural / Electronic

- 1) The existing site, as well as the proposed design, includes continuous perimeter landscaping around the full extent of the property to provide natural surveillance.
- 2) Additionally, the existing building has a video surveillance system, and the building expansion will have nineteen (19) new security cameras installed that will be monitored by on site staff.

Principle #2 Natural / Physical / Access Control

- 1) There is an existing perimeter security fence around the entire perimeter of the site that will be maintained throughout the project and after the construction is complete.
- 2) Concrete walkways within the vehicular use area provide for common walkways to guide users to and from proper entrances.
- 3) Both entrances have a secure rolling gate that is opened by calling the security office in the building and/or having key card access. These gates will be maintained throughout the project and after construction is complete.

Principle #3 Territorial Reinforcement

- 1) A "No Trespassing" sign will be installed on both access gates.

Principle #4 Maintenance

- 1) Maintenance contracts and supervision of both the entire landscaped grounds and the physical structures at the facility will mitigate the potential for unsupported and unsecured areas.
