

**Pompano Townhomes  
CPTED Narrative**

March 31, 2023

**Project Location:** 1531-1537 N. Dixie Highway

**Project Description:** The proposed development is located 1531 – 1537 N Dixie Highway, Pompano Beach FL 33060. The proposed development is to construct two (2) buildings consisting of two (2) stories and totaling ten (10) residential townhome units. The proposed development will also include surface parking for residents and their guests, and improved landscape.

Below is a description of how the project addresses each crime prevention through environmental design (“CPTED”) principle. The project team prepared a CPTED plan and attached it to this application package as Sheet SP-102.

1. **Natural/Electronic Surveillance:** This project adheres to this principle by the organization of physical features, activities, and people in such a way as to maximize visibility to and from the site. These elements of the project design further create a perception of safety by presenting a fear of detection for potential intruders. This project implements this principle in the following ways:

***Lighting:***

- a. An adequate functioning and well-designed lighting system will keep areas well-lit at night to establish a sense of security of the site.
- b. The entire site will feature adequate lighting, per standards of the code. Although there is no exterior dumpster area, the trash room is interior to the building and will be secure with adequate lighting.
- c. Foot-candle illumination will be increased at building entrances and high-use areas of the site. Proposed lighting does not conflict with proposed landscaping.
- d. Reduction of shadows and glare will be achieved as best possible.
- e. The use of convex mirrors will be implemented at building corners as necessary which will be applied along any pedestrian routes to enhance visibility.
- f. The parking areas open to the residence and their guest will be passively monitored. Due to the nature of the project and amount of parking spaces provided no emergency panic buttons will be proposed or provided.
- g. All exterior lighting including all building exits and pathways leading from public to private areas will be controlled by programmable time clock to ensure lighting is provided during the evening hours at all times.

***Sidewalks:***

- h. Site designers created a sidewalk circulation network that offers multiple pedestrian routes, eliminating dead-ends and entrapment zones.
- i. Clear lines of sight to and from private and public areas. The use of large windows with the building set close to the street will create a sense of place.

***Landscaping:***

- j. The proposed landscaping is designed to reduce obstructions to the building entrances, with taller vegetation and trees planted away from entrances and walkways.
- k. Landscaping around the perimeter of the site and around windows of the building will be maintained as to preserve a clear line of sight between 2.5 feet and 8 feet. This includes trimming tree limbs as to not hang lower than 8 feet and to trim shrubs/hedges to a maximum height of 2.5 feet.

**2. Physical/Natural Access Control:** This principle focusses on maintaining control and preventing potential criminals from gaining the opportunity to commit criminal activity.

The project achieves this by implementing the following concepts:

- a. The site is accessed by vehicles at two locations. The entrance will be from the publicly owned alley way. The applicant proposes to increase this alley to a 24-foot-wide two-way private driveway. The NW 15<sup>th</sup> Place to the north and NW 15<sup>th</sup> Court to the south which will provide natural surveillance and any incoming traffic can be monitored from these locations.
- b. There are no security gates at the main entrances, public vehicular/pedestrian access will be monitored by the property residences.
- c. Parking lot spaces are clearly identified with pavement marking and signage.
- d. Towing signage will be displayed to prevent unauthorized parking or abandonment of vehicles.
- e. This residential project does not contain any late-night business.
- f. Facilities/amenities will only be accessed by residents of the community and their guests.

**3. Territorial Reinforcement:** This principle includes defining public vs. private property. Regular occupants establish a sense of ownership of private space and notice potential criminal activity before it happens. The project achieves this by implementing the following concepts:

- a. A perimeter fence will separate the private development from the adjacent public space. The fence proposed along the perimeter of Dixie Highway will not have any breaks or access points. The only opening in the fence will be through the gated access

entry along the interior of the site. This is intended for the access into the private residence through the side loaded units.

- b. Perimeter landscape further separates public vs private space, specifically along the property's front, rear, and interior sides property.

**4. Maintenance:** Vandalism is a criminal activity which typically coincides with lack maintenance and abandonment. Maintenance is an important factor in preserving a safe environment and this project aims to satisfy this principle in the following ways:

- a. Landscape maintenance of the surrounding areas will indicate an adequate functioning project, therefore promoting the sense of occupancy, further deterring criminal activity.
- b. The grounds will be clean and clear of debris.
- c. Maintenance Staff will take notice of any damage or hazards within the maintained areas. They will perform quick and minor repairs to keep the site clean and safe.
- d. Graffiti will be cleaned or painted over as quickly as possible, Anti-graffiti paint will be applied along the 8-foot lower portion of the building as needed.
- e. If applicable, all exterior power outlets will have a lock or power secure internal cut-off switch to deny unauthorized access.
- f. All exterior water spigots will have a secure locking cap to deny unauthorized use no public benches will be proposed for residential use.

**5. Activity Support:** Activity support does exactly what the title presents; to provide support to the surrounding areas by establishing a presence of people and activity. Criminals are less likely to commit a crime if they know other people may be watching. The project adheres to this principle in the following ways:

- a. The building is set close to the street, which will promote integration of private and public space.
- b. Pedestrian activity zones are created only for the residence and their guest internal to the site, no resting areas are proposed along Dixie Highway or in the interior of the site.
- c. Patio areas will only be provided for residence and their guests further supporting the principle of natural surveillance as people will be aware of any vandalism happening in the surrounding areas.
