

## Placement Conditions

The signs (lettering) shall be centered both vertically and horizontally within the sign band area or centered horizontally above the sign band on demised premises entrance. When the tenant has a corner location following this same criteria, may be installed at the upper most corner of the other elevation nearest to the front entrance.

Signs may be either illuminated front-lit (flush mounted) channel letters or non-illuminated cut out and painted acrylic ¼" or ½", thick stud mounted letters. In extenuating circumstances due to complications with electrical access, discreet raceways painted to match fascia, may be used with front-lit channel letters.

Signs to be the same height on the elevation as Option 1
